VENKATESH KONDAM

SENIOR DATA ENGINEER | ANALYTICS ENGINEERING | AI-ENABLED DATA PRODUCTS

+1 (650) 229-9566 | venkateshkondam04@gmail.com | linkedin.com/in/venkateshkondam

PROFESSIONAL SUMMARY

Data engineer with 13+ years of IT experience turning raw data into canonical, analytics-ready datasets through dbt, Snowflake, Airflow, SQL, and Python, with Azure Databricks lakehouse experience. Partner with analysts, data scientists, and product and business stakeholders to translate reporting needs into reusable data models, trusted metrics, and consistent transformation logic that support self-serve analytics. Strong in dimensional modeling, automated data testing, reconciliation, data integrity controls, production troubleshooting, and GitHub-based delivery, with reporting experience supporting the Percipio learning product and enterprise financial platforms. Hands-on experience building AI Agent, and use AI-assisted coding agents (Windsurf, Databricks Genie, Snowflake Cortex) daily to speed up development while keeping quality controls such as dbt tests, validation, and code review in place.

CORE SKILLS

Analytics engineering: dbt models, reusable macros, automated tests, dimensional modeling, layered transformations, canonical datasets, metric definitions, reporting datasets for self-serve analytics

Data reliability: data integrity standards, reconciliation, validation, deduplication, lineage, documentation, monitoring, root-cause analysis

Languages and platforms: SQL, Python, PySpark, Snowflake, Databricks, Delta Lake, SQL Server, PostgreSQL

Orchestration and delivery: Apache Airflow, Azure Data Factory, Git/GitHub, CI/CD practices, SSIS, Matillion

AI and agents: AI agent design and development (Onboarding AI Agent), AI-assisted coding with Windsurf and Databricks Genie, applying AI to raise productivity while preserving data quality

Reporting and integration: Power BI, APIs, relational databases, SaaS applications, AWS, ADLS, cloud storage

PROFESSIONAL EXPERIENCE

Experis / ManpowerGroup | Data Engineer | May 2026 - Present

Client: SMBC Bank | Treasury Liquidity | Azure Databricks, PySpark, SQL, ADF, ADLS, Databricks Genie

- Build and support treasury liquidity pipelines that transform source data into curated datasets for monitoring and reporting.
- Translate business and source-system requirements into reusable transformation logic across bronze, silver, and gold lakehouse layers, supporting consistent downstream reporting.
- Implement source-to-target validation and reconciliation controls; investigate discrepancies and resolve data-type, schema, and processing issues with engineering and business teams.
- Lead a multi-team testing proof of concept using isolated catalogs, configuration-driven processing, Delta cloning, and audit results to reduce testing conflicts and improve release reliability.
- Manage Git/GitHub-based changes across QA, UAT, and production; troubleshoot pipeline failures and performance issues and document resolutions.
- Use Databricks Genie and AI-assisted coding to accelerate PySpark and SQL development and data exploration, validating results through reconciliation controls before release.

3i Infotech Inc. | Data Engineer | Apr 2025 - May 2026

Client: BNY Mellon | Snowflake Analytics Platform | dbt, SQL, Airflow, AWS, AI Agents, Windsurf

- Built modular dbt models and reusable macros that standardized business logic and produced canonical, trusted Snowflake datasets for analytics and reporting.
- Developed multi-step ELT workflows integrating APIs, relational databases, SaaS applications, and cloud storage; applied dimensional modeling and layered transformations for downstream consumption.
- Implemented automated dbt tests, validation checks, deduplication, and model documentation to improve data integrity and traceability.

- Orchestrated ingestion and dbt transformations with Apache Airflow, monitored dependencies, and investigated failed or anomalous executions.
- Partnered with analysts, data scientists, and business stakeholders to resolve reporting discrepancies through SQL reconciliation and root-cause analysis.
- Optimized Snowflake workloads using query profiling, warehouse sizing, and pruning; supported version-controlled dbt development and CI/CD across environments.
- Designed and developed an Onboarding AI Agent that helps new team members set up required tools, find project documentation, and complete knowledge transfer on the team's products and processes, accelerating new-joiner ramp-up.
- Used the Windsurf AI coding agent to speed up dbt, SQL, and Airflow development, applying dbt tests, validation checks, and code review to keep AI-assisted output production-grade.

Deloitte | Data Engineer - Enterprise MDM | Sep 2023 - Jan 2025

Snowflake, Azure Data Factory, SQL, Databricks, Python

- Partnered with analysts, data scientists, and stakeholders to translate master-data and analytics requirements into governed models, tables, views, and transformation workflows.
- Built Snowflake transformations and ADF pipelines integrating APIs, databases, cloud storage, and on-premises sources.
- Implemented cleansing, deduplication, enrichment, and consistency checks; optimized Snowflake queries and ADF data movement; documented pipeline architecture.

Technovert Solutions | Data Engineer | Dec 2022 - Sep 2023

Client: Digital Realty | Azure Synapse, Azure Data Factory, SQL

- Built ADF and Synapse ELT pipelines integrating heterogeneous sources into analytical tables and schemas for reporting.
- Implemented SQL transformations, cleansing, deduplication, and validation, applying partitioning and indexing for scalable reporting datasets.

Encora | Data Engineer | Jan 2022 - Dec 2022

Client: KSL, Singapore | Snowflake, Matillion, SQL

- Built Snowflake ELT pipelines using Matillion and SQL to integrate multiple source systems and transform data for analytical use.
- Implemented validation, deduplication, and enrichment; monitored pipeline reliability and resolved data-quality discrepancies.

Skillsoft | Data Engineer | Aug 2020 - Dec 2021

Product: Percipio | SQL Server, SSIS, Power BI

- Designed dimensional warehouse models and SQL/SSIS pipelines that produced curated datasets for Power BI dashboards and product analytics supporting the Percipio learning product.
- Worked with analysts to turn reporting requirements into data models and views; implemented validation rules and performance improvements.

Earlier Experience | SQL / ETL Developer | Feb 2013 - Jul 2020

Compugain Solutions (Radian Bank), Sutherland Global Solutions, Vaya Finserv, Imedx Information Services, Sollet Soft Solutions

- Built enterprise data integration, warehouse, and reporting solutions using SQL Server, SSIS, PostgreSQL, Pentaho, and related technologies.
- Developed complex SQL, stored procedures, dimensional data marts, reconciliation logic, quality controls, job monitoring, and error handling for business-critical workflows.

EDUCATION AND CERTIFICATION

B.Tech, Computer Science and Engineering | Institute of Engineering College, affiliated with JNTU Hyderabad | 2008

Microsoft Exam 70-463 | Implementing a Data Warehouse with Microsoft SQL Server 2012/2014
